

Mine Safety and Ventilation Regulations 2026

Section 1

1. All underground working areas shall have adequate ventilation.
2. The ventilation system shall maintain the required airflow throughout the underground working areas.
3. Ventilation measurements shall be recorded during regular safety inspections.

Section 2

4. Ventilation routes shall be maintained so that airflow is not unnecessarily obstructed.
5. Any significant ventilation failure shall be reported to the responsible mine safety officer.
6. Ventilation inspection records shall be retained for compliance review.

Section 3

7. Safety inspections shall verify that required ventilation controls are operational.
8. Corrective actions identified during inspections shall be documented and tracked until closure.
9. Compliance evidence should identify the applicable requirement, inspection date, responsible person, and observed result.
